

FOAM-BRITE CONDENSER COIL CLEANER

Foam-Brite is a non-acidic foaming brightener and cleaner for finned, air cooled condenser coils. Foam-Brite's penetrating foaming action lifts and pushes contaminants and oxide off coils, including difficult to remove cooking greases found coating coils in restaurants. The foaming action penetrates stubborn grease, tars and dirt, dissolves and disperses them so they can be rinsed away with water. Leaves aluminium surfaces not only bright and shiny, but also completely clean and insulation free in less than five minutes. Concentrated and economical dilutes with water. Will not harm copper or aluminium.
